**Plan Sheet:** L-2

**Specification Section:** n/a

**INTERPRETATION REQUESTED:**

The existing pavement appears to be only 1-2" in depth. The plans show a conform grind and a wedge grind at these locations, just to the east of Reed Ave, north of the median. It appears there will not be a deep enough roadway section to grind through, nor will there be an adequate structural section to overlay. Does the city want to change the design in order to provide an adequate final structural section for the public?
